T. Rowe Price Investment Services, Inc., Distributor.

## T. Rowe Price Equity Income Portfolio

### Highlights

- The equity market advanced sharply in 2013, providing excellent returns in both halves of the year against a backdrop of encouraging economic news, healthy gains in corporate earnings, and renewed investor interest in equities.
- Portfolio performance was strong through the year and slightly surpassed its peer group average although it lagged the broad market as interest rates rose sharply in the second half.
- Many of our large-capitalization cyclical holdings performed very well, while a few energy, utilities, and telecommunication services positions lagged the broad market.
- After last year's strong gains, we see fewer compelling investment opportunities than in recent years, which makes us more cautious. However, we remain optimistic about the portfolio's long-term prospects.

---

The views and opinions in this report were current as of December 31, 2013. They are not guarantees of performance or investment results and should not be taken as investment advice. Investment decisions reflect a variety of factors, and the managers reserve the right to change their views about individual stocks, sectors, and the markets at any time. As a result, the views expressed should not be relied upon as a forecast of the fund's future investment intent. The report is certified under the Sarbanes-Oxley Act, which requires mutual funds and other public companies to affirm that, to the best of their knowledge, the information in their financial reports is fairly and accurately stated in all material respects.

## Manager's Letter

T. Rowe Price Equity Income Portfolio

## Dear Investor

The equity market advanced sharply in 2013, providing excellent returns in both halves of the year with only minor setbacks along the way. Encouraging economic news, healthy gains in corporate earnings, and renewed investor interest in equities combined to create a favorable environment for stocks, with the S&P 500 Index generating a total return of 32.39%. Large-cap value stocks, with their relatively high dividend yields, participated fully in the rally. Investors seeking dividend income and appreciation fared far better than fixed income investors, who saw their investments struggle through most of the year. Concerns about likely changes in Federal Reserve policy triggered a rise in interest rates, which put pressure on longer-term Treasuries. The 10-year Treasury yield rose more than a full percentage point in 2013 and closed the year above 3%.

### Performance Comparison

Periods Ended 12/31/13	Total Return	
	6 Months	12 Months
Equity Income Portfolio	13.63%	29.72%
Equity Income Portfolio-II	13.55	29.41
S&P 500 Index	16.31	32.39
Lipper Variable Annuity Underlying Equity Income Funds Average	12.72	28.16

In this environment, the Equity Income Portfolio returned 13.63% in the second half, trailing the 16.31% return of the S&P 500 Index and outperforming the 12.72% return of the Lipper Variable Annuity Underlying Equity Income Funds Average. For the year, the portfolio returned 29.72%, lagging the 32.39% of the S&P while surpassing the Lipper average's 28.16% return. (The returns for the Portfolio-II were lower, reflecting its different fee structure.)

As rising interest rates affected the bond market, several traditional high-dividend-yield sectors also came under pressure. Nevertheless, we were reasonably satisfied with your portfolio's performance in 2013.

## Dividend Distribution

On December 17, 2013, your Board of Directors declared a regular income dividend of \$0.11 per share for the fourth quarter, which was paid on December 19. You should already have received a check or statement reflecting it. The fourth-quarter income dividend brings total 2013 income dividends to \$0.40 per share. (Distributions were different for the Portfolio-II shares.)

## Portfolio Review

In 2013, risk and cyclical were in favor, and safety and stability were less profitable. On the positive side of the ledger, our investments in many large-capitalization cyclical companies, such as **DuPont**, **3M**, **Boeing**, **Honeywell International**, **Harris**, and **Illinois Tool Works**, contributed to your portfolio's strong performance. Media companies performed well, with **Time Warner** and **Walt Disney** generating very strong returns. The financials sector was also profitable, and we reaped solid returns from **Bank of America**, **JPMorgan Chase**, **American Express**, and **Legg Mason**. Other holdings performed very well on their own, absent generally strong support from their sectors. These included energy giant **Hess**, agricultural processor **Archer-Daniels-Midland**, pharmaceutical stalwart **Bristol-Myers Squibb**, and tech mainstay **Microsoft**. (Please refer to our portfolio of investments for a complete list of holdings and the amount each represents in the portfolio.)

### Sector Diversification

	Percent of Net Assets	
	6/30/13	12/31/13
Financials	20.7%	19.6%
Industrials and Business Services	14.3	15.3
Energy	13.9	14.5
Consumer Discretionary	10.9	10.5
Information Technology	8.3	8.4
Health Care	6.3	6.5
Utilities	5.9	5.7
Consumer Staples	5.1	4.9
Materials	4.3	4.8
Telecommunication Services	3.6	3.4
Other and Reserves	6.7	6.4
Total	100.0%	100.0%

Historical weightings reflect current industry/sector classifications.

Notwithstanding the strong year, some of our holdings in the energy, utilities, and telecommunication services sectors lagged the broad market. Several of our consumer staples investments, including **Campbell Soup** and **McCormick**, struggled to keep up with the overall market. Utilities stocks **Duke Energy**, **Entergy**, and **Exelon** and telecommunication services companies **AT&T** and **Verizon** were somewhat disappointing. Even in a powerful equity market advance, such as we experienced last year, rising interest rates tend to take a toll on these sectors. A couple of our positions, notably **Petrobras** and **Quest Diagnostics**, were hampered by company-specific issues.

The Major Portfolio Changes table highlights our investment activity over the last six and 12 months. In the last six months of the year, our largest purchases included **Deere**, **Stanley Black & Decker**, **GlaxoSmithKline**, and **Potash Corporation of Saskatchewan**. These companies share the common characteristics of attractive valuations, good dividend histories, strong financial positions, and a recent pattern of disappointing stock market returns. Identifying good companies selling at unusually attractive prices is the hallmark of what we do. Regarding our sales, most of them reflected decisions made in the second half about individual company valuations. As always, our sale of a security is a comment on its valuation and not a statement about the company's quality. For example, 3M is an outstanding global corporation with a great track record. There comes a time, however, when a company's stock price advances to the point where its valuation relative to the company's equity is less compelling, in our opinion. We would say the same about **Capital One Financial**, **Lockheed Martin**, and **SLM Corporation** (Sallie Mae), which were among the stocks we eliminated in the second half of 2013.

## Financial Profile

As of 12/31/13	Equity Income Portfolio	S&P 500 Index
Price/Book Ratio	2.3X	3.3X
Price/Earnings Ratio (Based on next 12 months' estimated earnings)*	14.4X	16.3X
Historical Beta (Based on monthly returns for five years)	1.1	1.0

\*Source for data: IBES. Statistics are based on the companies in the portfolio and are not a projection of future portfolio performance.

## Outlook

We were somewhat surprised by the market's strength in 2013, and we enter 2014 with a cautiously optimistic outlook. Following the excellent gain for the S&P 500, corporate earnings growing in the area of 6%, and an expansion in price/earnings multiples, stocks have become more expensive. Nevertheless, despite less appealing valuations, equity markets historically have generated reasonable returns in most years following strong years like 2013. Rarely have there been consecutive years with returns of 30% or more, but we would not be surprised to see continuing gains this year, although on a more modest scale. That said, a correction is likely at some point, as it has been some time since we've seen a significant market pullback.

We expect continued reasonable economic growth in 2014. We believe corporate earnings will grow at about the same rate as in 2013, and we believe companies will continue to buy back their shares and increase dividends in 2014. The question now is, how will investors react to a gradual change in Federal Reserve policy scheduled to begin in January? We expect to see some ongoing upward pressure on interest rates this year. However, while investors often worry that higher interest rates could undermine stocks, higher rates are usually a function of firmer economic conditions, which tend to be supportive of corporate earnings.

Our view is that this is not an environment in which investors should take undue risk. There are a few signs of "irrational exuberance," to quote a former Fed chairman, and investors have exhibited some aggressive behavior in the initial public offering market. As we explore the range of investment choices in our search for portfolio holdings, we see fewer intriguing opportunities than in recent years. This makes us more cautious at the onset of the new year, but we remain optimistic about the portfolio's prospects as we focus on our efforts to generate appealing long-term returns for our shareholders.

We appreciate your continued confidence in the Equity Income Portfolio.

Respectfully submitted,

Brian C. Rogers  
President of the portfolio and chairman of its Investment Advisory Committee

January 17, 2014

*The committee chairman has day-to-day responsibility for managing the portfolio and works with committee members in developing and executing the portfolio's investment program.*

### Risks of Investing in the Portfolio

Value investors seek to invest in companies whose stock prices are low in relation to their real worth or future prospects. By identifying companies whose stocks are currently out of favor or misunderstood, value investors hope to realize significant appreciation as other investors recognize the stock's intrinsic value and the price rises accordingly. The value approach carries the risk that the market will not recognize a security's intrinsic value for a long time or that a stock judged to be undervalued may actually be appropriately priced.

### Glossary

**Beta:** A measure of the market risk of a stock showing how responsive it is to a given market index, such as the S&P 500 Index. By definition, the beta of the benchmark index is 1.00. A fund with a 1.10 beta is expected to perform 10% better than the index in up markets and 10% worse in down markets. Usually, higher betas represent riskier investments.

**Dividend yield:** The annual dividend of a stock divided by the stock's price.

**Earnings growth rate – current fiscal year:** Measures the annualized percent change in earnings per share from the prior fiscal year to the current fiscal year.

**Lipper averages:** The averages of available mutual fund performance returns for specified time periods in categories defined by Lipper Inc.

**Price-to-earnings (P/E) ratio – current fiscal year:** A valuation measure calculated by dividing the price of a stock by its reported earnings per share from the latest fiscal year. The ratio is a measure of how much investors are willing to pay for the company's earnings. The higher the P/E, the more investors are paying for a company's current earnings.

**Price-to-earnings (P/E) ratio – next fiscal year:** A valuation measure calculated by dividing the price of a stock by its estimated earnings for the next fiscal year. The ratio is a measure of how much investors are willing to pay for the company's future earnings. The higher the P/E, the more investors are paying for the company's expected earnings growth in the next fiscal year.

### Glossary (continued)

**Price-to-earnings (P/E) ratio – 12 months forward:** A valuation measure calculated by dividing the price of a stock by the analysts' forecast of the next 12 months' expected earnings. The ratio is a measure of how much investors are willing to pay for the company's future earnings. The higher the P/E, the more investors are paying for a company's earnings growth in the next 12 months.

**Projected earnings growth rate (IBES):** A company's expected earnings per share growth rate for a given time period based on the forecast from the Institutional Brokers' Estimate System, which is commonly referred to as IBES.

**S&P 500 Index:** An unmanaged index that tracks the stocks of 500 primarily large-cap U.S. companies.

## Performance and Expenses

T. Rowe Price Equity Income Portfolio

### Growth of \$10,000

This chart shows the value of a hypothetical \$10,000 investment in the portfolio over the past 10 fiscal year periods or since inception (for portfolios lacking 10-year records). The result is compared with benchmarks, which may include a broad-based market index and a peer group average or index. Market indexes do not include expenses, which are deducted from portfolio returns as well as mutual fund averages and indexes.

### Equity Income Portfolio

Note: Performance for the II Class will vary due to its differing fee structure. See the returns table below.

### Average Annual Compound Total Return

Periods Ended 12/31/13	1 Year	5 Years	10 Years
Equity Income Portfolio	29.72%	16.86%	7.41%
Equity Income Portfolio-II	29.41	16.57	7.14

*Current performance may be higher or lower than the quoted past performance, which cannot guarantee future results. Share price, principal value, and return will vary, and you may have a gain or loss when you sell your shares. For the most recent month-end performance, please contact a T. Rowe Price representative at 1-800-469-6587 (financial advisors, or customers who have an advisor, should call 1-800-638-8790). Returns do not reflect taxes that the shareholder may pay on distributions or the redemption of shares. Total returns do not include charges imposed by your insurance company's separate account. If these had been included, performance would have been lower.*

This table shows how the portfolio would have performed each year if its actual (or cumulative) returns for the periods shown had been earned at a constant rate. Average annual total return figures include changes in principal value, reinvested dividends, and capital gain distributions. When assessing performance, investors should consider both short- and long-term returns.

### Fund Expense Example

As a mutual fund shareholder, you may incur two types of costs: (1) transaction costs, such as redemption fees or sales loads, and (2) ongoing costs, including management fees, distribution and service (12b-1) fees, and other fund expenses. The following example is intended to help you understand your ongoing costs (in dollars) of investing in the fund and to compare these costs with the ongoing costs of investing in other mutual funds. The example is based on an investment of \$1,000 invested at the beginning of the most recent six-month period and held for the entire period.

Shares of the fund are currently offered only through certain insurance companies as an investment medium for both variable annuity contracts and variable life insurance policies. Please note that the fund has two classes of shares: the original share class and II Class. II Class shares are sold through financial intermediaries, which are compensated for distribution, shareholder servicing, and/or certain administrative services under a Board-approved Rule 12b-1 plan.

#### Actual Expenses

The first line of the following table (Actual) provides information about actual account values and actual expenses. You may use the information on this line, together with your account balance, to estimate the expenses that you paid over the period. Simply divide your account value by \$1,000 (for example, an \$8,600 account value divided by \$1,000 = 8.6), then multiply the result by the number on the first line under the heading "Expenses Paid During Period" to estimate the expenses you paid on your account during this period.

#### Hypothetical Example for Comparison Purposes

The information on the second line of the table (Hypothetical) is based on hypothetical account values and expenses derived from the fund's actual expense ratio and an assumed 5% per year rate of return before expenses (not the fund's actual return). You may compare the ongoing costs of investing in the fund with other funds by contrasting this 5% hypothetical example and the 5% hypothetical examples that appear in the shareholder reports of the other funds. The hypothetical account values and expenses may not be used to estimate the actual ending account balance or expenses you paid for the period.

You should also be aware that the expenses shown in the table highlight only your ongoing costs and do not reflect any transaction costs, such as redemption fees or sales loads. Therefore, the second line of the table is useful in comparing ongoing costs only and will not help you determine the relative total costs of owning different funds. To the extent a fund charges transaction costs, however, the total cost of owning that fund is higher.

**Fund Expense Example (continued)**

**Equity Income Portfolio**

	Beginning Account Value 7/1/13	Ending Account Value 12/31/13	Expenses Paid During Period* 7/1/13 to 12/31/13
--	---	--	---

**Equity Income Portfolio**

Actual	\$1,000.00	\$1,136.30	\$4.58
--------	------------	------------	--------

Hypothetical

(assumes 5% return

before expenses)

	1,000.00	1,020.92	4.33
--	----------	----------	------

**Equity Income Portfolio-II**

Actual	1,000.00	1,135.50	5.92
--------	----------	----------	------

Hypothetical

(assumes 5% return

before expenses)

	1,000.00	1,019.66	5.60
--	----------	----------	------

\*Expenses are equal to the portfolio's annualized expense ratio for the 6-month period, multiplied by the average account value over the period, multiplied by the number of days in the most recent fiscal half year (184), and divided by the days in the year (365) to reflect the half-year period. The annualized expense ratio of the Equity Income Portfolio was 0.85%, and the Equity Income Portfolio-II was 1.10%.

**Affiliated Companies**

(\$000s)

The fund may invest in certain securities that are considered affiliated companies. As defined by the 1940 Act, an affiliated company is one in which the fund owns 5% or more of the outstanding voting securities, or a company which is under common ownership or control. Based on the fund's relative ownership, the following securities were considered affiliated companies for all or some portion of the year ended December 31, 2013. Purchase and sales cost and investment income reflect all activity for the period then ended.

<b>Affiliate</b>	<b>Purchase Cost</b>	<b>Sales Cost</b>	<b>Investment Income</b>	<b>Value 12/31/13</b>	<b>Value 12/31/12</b>

## Notes to Financial Statements

T. Rowe Price Equity Income Portfolio  
December 31, 2013

T. Rowe Price Equity Series, Inc. (the corporation), is registered under the Investment Company Act of 1940 (the 1940 Act). The Equity Income Portfolio (the fund) is a diversified, open-end management investment company established by the corporation. Shares of the fund currently are offered only through certain insurance companies as an investment medium for both variable annuity contracts and variable life insurance policies. The fund seeks a high level of dividend income and long-term capital growth primarily through investments in stocks. The fund has two classes of shares: the Equity Income Portfolio original share class (Equity Income Class), offered since March 31, 1994, and the Equity Income Portfolio-II (Equity Income-II Class), offered since April 30, 2002. Equity Income-II Class shares are sold through financial intermediaries, which it compensates for distribution, shareholder servicing, and/or certain administrative services under a Board-approved Rule 12b-1 plan. Each class has exclusive voting rights on matters related solely to that class; separate voting rights on matters that relate to both classes; and, in all other respects, the same rights and obligations as the other class.

### NOTE 1 - SIGNIFICANT ACCOUNTING POLICIES

**Basis of Preparation** The fund is an investment company and follows accounting and reporting guidance in the Financial Accounting Standards Board *Accounting Standards Codification* Topic 946 (ASC 946). The accompanying financial statements were prepared in accordance with accounting principles generally accepted in the United States of America (GAAP), including but not limited to ASC 946. GAAP requires the use of estimates made by management. Management believes that estimates and valuations are appropriate; however, actual results may differ from those estimates, and the valuations reflected in the accompanying financial statements may differ from the value ultimately realized upon sale or maturity.

**Investment Transactions, Investment Income, and Distributions** Income and expenses are recorded on the accrual basis. Dividends received from mutual fund investments are reflected as dividend income; capital gain distributions are reflected as realized gain/loss. Earnings on investments recognized as partnerships for federal income tax purposes reflect the tax character of such earnings. Dividend income and capital gain distributions are recorded on the ex-dividend date. Income tax-related interest and penalties, if incurred, would be recorded as income tax expense. Investment transactions are accounted for on the trade date. Realized gains and losses are reported on the identified cost basis. Distributions to shareholders are recorded on the ex-dividend date. Income distributions are declared and paid by each class quarterly. Capital gain distributions, if any, are generally declared and paid by the fund annually.

**Currency Translation** Assets, including investments, and liabilities denominated in foreign currencies are translated into U.S. dollar values each day at the prevailing exchange rate, using the mean of the bid and asked prices of such currencies against U.S. dollars as quoted by a major bank. Purchases and sales of securities, income, and expenses are translated into U.S. dollars at the prevailing exchange rate on the date of the transaction. The effect of changes in foreign currency exchange rates on realized and unrealized security gains and losses is reflected as a component of security gains and losses.

**Class Accounting** Equity Income-II pays distribution, shareholder servicing, and/or certain administrative expenses in the form of Rule 12b-1 fees, in an amount not exceeding 0.25% of the class's average daily net assets. Investment income, investment management and administrative expense, and realized and unrealized gains and losses are allocated to the classes based upon the relative daily net assets of each class.

**Rebates** Subject to best execution, the fund may direct certain security trades to brokers who have agreed to rebate a portion of the related brokerage commission to the fund in cash. Commission rebates are reflected as realized gain on securities in the accompanying financial statements and totaled \$6,000 for the year ended December 31, 2013.

**Credits** Credits are earned on the fund's temporarily uninvested cash balances held at the custodian, and such credits reduce the amount paid by the manager for custody of the fund's assets. In order to pass the benefit of custody credits to the fund, the manager has voluntarily reduced its investment management and administrative expense in the accompanying financial statements.

**New Accounting Guidance** On January 1, 2013, the fund adopted new accounting guidance, issued by the Financial Accounting Standards Board, that requires an entity to disclose information about offsetting and related arrangements to enable users of its financial statements to understand the effect of those arrangements on its financial position. Adoption had no effect on the fund's net assets or results of operations.

## NOTE 2 - VALUATION

The fund's financial instruments are valued, and each class's net asset value (NAV) per share is computed at the close of the New York Stock Exchange (NYSE), normally 4 p.m. ET, each day the NYSE is open for business.

**Fair Value** The fund's financial instruments are reported at fair value, which GAAP defines as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The T. Rowe Price Valuation Committee (the Valuation Committee) has been established by the fund's Board of Directors (the Board) to ensure that financial instruments are appropriately priced at fair value in accordance with GAAP and the 1940 Act. Subject to oversight by the Board, the Valuation Committee develops and oversees pricing-related policies and procedures and approves all fair value determinations. Specifically, the Valuation Committee establishes procedures to value securities; determines pricing techniques, sources, and persons eligible to effect fair value pricing actions; oversees the selection, services, and performance of pricing vendors; oversees valuation-related business continuity practices; and provides guidance on internal controls and valuation-related matters. The Valuation Committee reports to the fund's Board; is chaired by the fund's treasurer; and has representation from legal, portfolio management and trading, operations, and risk management.

Various valuation techniques and inputs are used to determine the fair value of financial instruments. GAAP establishes the following fair value hierarchy that categorizes the inputs used to measure fair value:

Level 1 – quoted prices (unadjusted) in active markets for identical financial instruments that the fund can access at the reporting date

Level 2 – inputs other than Level 1 quoted prices that are observable, either directly or indirectly (including, but not limited to, quoted prices for similar financial instruments in active markets, quoted prices for identical or similar financial instruments in inactive markets, interest rates and yield curves, implied volatilities, and credit spreads)

Level 3 – unobservable inputs

Observable inputs are developed using market data, such as publicly available information about actual events or transactions, and reflect the assumptions that market participants would use to price the financial instrument.

Unobservable inputs are those for which market data are not available and are developed using the best information available about the assumptions that market participants would use to price the financial instrument. GAAP requires valuation techniques to maximize the use of relevant observable inputs and minimize the use of unobservable inputs.

When multiple inputs are used to derive fair value, the financial instrument is assigned to the level within the fair value hierarchy based on the lowest-level input that is significant to the fair value of the financial instrument. Input levels are not necessarily an indication of the risk or liquidity associated with financial instruments at that level but rather the degree of judgment used in determining those values.

**Valuation Techniques** Equity securities listed or regularly traded on a securities exchange or in the over-the-counter (OTC) market are valued at the last quoted sale price or, for certain markets, the official closing price at the time the valuations are made. OTC Bulletin Board securities are valued at the mean of the closing bid and asked prices. A security that is listed or traded on more than one exchange is valued at the quotation on the exchange determined to be the primary market for such security. Listed securities not traded on a particular day are valued at the mean of the closing bid and asked prices for domestic securities and the last quoted sale or closing price for international securities.

For valuation purposes, the last quoted prices of non-U.S. equity securities may be adjusted to reflect the fair value of such securities at the close of the NYSE. If the fund determines that developments between the close of a foreign market and the close of the NYSE will, in its judgment, materially affect the value of some or all of its portfolio securities, the fund will adjust the previous quoted prices to reflect what it believes to be the fair value of the securities as of the close of the NYSE. In deciding whether it is necessary to adjust quoted prices to reflect fair value, the fund reviews a variety of factors, including developments in foreign markets, the performance of U.S. securities markets, and the performance of instruments trading in U.S. markets that represent foreign securities and baskets of foreign securities. The fund may also fair value securities in other situations, such as when a particular foreign market is closed but the fund is open. The fund uses outside pricing services to provide it with quoted prices and information to evaluate or adjust those prices. The fund

cannot predict how often it will use quoted prices and how often it will determine it necessary to adjust those prices to reflect fair value. As a means of evaluating its security valuation process, the fund routinely compares quoted prices, the next day's opening prices in the same markets, and adjusted prices.

Actively traded domestic equity securities generally are categorized in Level 1 of the fair value hierarchy. Non-U.S. equity securities generally are categorized in Level 2 of the fair value hierarchy despite the availability of quoted prices because, as described above, the fund evaluates and determines whether those quoted prices reflect fair value at the close of the NYSE or require adjustment. OTC Bulletin Board securities, certain preferred securities, and equity securities traded in inactive markets generally are categorized in Level 2 of the fair value hierarchy.

Investments in mutual funds are valued at the mutual fund's closing NAV per share on the day of valuation and are categorized in Level 1 of the fair value hierarchy. Assets and liabilities other than financial instruments, including short-term receivables and payables, are carried at cost, or estimated realizable value, if less, which approximates fair value.

Thinly traded financial instruments and those for which the above valuation procedures are inappropriate or are deemed not to reflect fair value are stated at fair value as determined in good faith by the Valuation Committee. The objective of any fair value pricing determination is to arrive at a price that could reasonably be expected from a current sale. Financial instruments fair valued by the Valuation Committee are primarily private placements, restricted securities, warrants, rights, and other securities that are not publicly traded.

Subject to oversight by the Board, the Valuation Committee regularly makes good faith judgments to establish and adjust the fair valuations of certain securities as events occur and circumstances warrant. For instance, in determining the fair value of an equity investment with limited market activity, such as a private placement or a thinly traded public company stock, the Valuation Committee considers a variety of factors, which may include, but are not limited to, the issuer's business prospects, its financial standing and performance, recent investment transactions in the issuer, new rounds of financing, negotiated transactions of significant size between other investors in the company, relevant market valuations of peer companies, strategic events affecting the company, market liquidity for the issuer, and general economic conditions and events. In consultation with the investment and pricing teams, the Valuation Committee will determine an appropriate valuation technique based on available information, which may include both observable and unobservable inputs. The Valuation Committee typically will afford greatest weight to actual prices in arm's length transactions, to the extent they represent orderly transactions between market participants; transaction information can be reliably obtained; and prices are deemed representative of fair value. However, the Valuation Committee may also consider other valuation methods such as market-based valuation multiples; a discount or premium from market value of a similar, freely traded security of the same issuer; or some combination. Fair value determinations are reviewed on a regular basis and updated as information becomes available, including actual purchase and sale transactions of the issue. Because any fair value determination involves a significant amount of judgment, there is a degree of subjectivity inherent in such pricing decisions, and fair value prices determined by the Valuation Committee could differ from those of other market participants. Depending on the relative significance of unobservable inputs, including the valuation technique(s) used, fair valued securities may be categorized in Level 2 or 3 of the fair value hierarchy.

**Valuation Inputs** The following table summarizes the fund's financial instruments, based on the inputs used to determine their fair values on December 31, 2013:

(\$000s)	Level 1	Level 2	Level 3	Total Value
	Quoted Prices	Significant Observable Inputs	Significant Unobservable Inputs	
Investments in Securities, except:	\$ 79,817	\$ –	\$ –	\$ 79,817
Common Stocks	1,136,960	27,406	–	1,164,366
Convertible Preferred Stocks	–	599	–	599
Total	\$ 1,216,777	\$ 28,005	\$ –	\$ 1,244,782

There were no material transfers between Levels 1 and 2 during the year.

**NOTE 3 - OTHER INVESTMENT TRANSACTIONS**

Consistent with its investment objective, the fund engages in the following practices to manage exposure to certain risks and/or to enhance performance. The investment objective, policies, program, and risk factors of the fund are described more fully in the fund's prospectus and Statement of Additional Information.

**Securities Lending** The fund lends its securities to approved brokers to earn additional income. Its securities lending activities are administered by a lending agent in accordance with a securities lending agreement. It receives collateral in the form of cash or U.S. government securities, valued at 102% to 105% of the value of the securities on loan. Collateral is maintained over the life of the loan in an amount not less than the value of loaned securities; any additional collateral required due to changes in security values is delivered to the fund the next business day. Cash collateral is invested by the lending agent(s) in accordance with investment guidelines approved by fund management. Additionally, the lending agent indemnifies the fund against losses resulting from borrower default. Although risk is mitigated by the collateral and indemnification, the fund could experience a delay in recovering its securities and a possible loss of income or value if the borrower fails to return the securities, collateral investments decline in value and the lending agent fails to perform. Securities lending revenue consists of earnings on invested collateral and borrowing fees, net of any rebates to the borrower, compensation to the lending agent, and other administrative costs. In accordance with GAAP, investments made with cash collateral are reflected in the accompanying financial statements, but collateral received in the form of securities is not. At December 31, 2013, there were no securities on loan.

**Other** Purchases and sales of portfolio securities other than short-term securities aggregated \$135,372,000 and \$191,823,000, respectively, for the year ended December 31, 2013.

**NOTE 4 - FEDERAL INCOME TAXES**

No provision for federal income taxes is required since the fund intends to continue to qualify as a regulated investment company under Subchapter M of the Internal Revenue Code and distribute to shareholders all of its taxable income and gains. Distributions determined in accordance with federal income tax regulations may differ in amount or character from net investment income and realized gains for financial reporting purposes. Financial reporting records are adjusted for permanent book/tax differences to reflect tax character but are not adjusted for temporary differences.

The fund files U.S. federal, state, and local tax returns as required. The fund's tax returns are subject to examination by the relevant tax authorities until expiration of the applicable statute of limitations, which is generally three years after the filing of the tax return but which can be extended to six years in certain circumstances. Tax returns for open years have incorporated no uncertain tax positions that require a provision for income taxes.

Reclassifications between income and gain relate primarily to the character of net currency losses. For the year ended December 31, 2013, the following reclassifications were recorded to reflect tax character (there was no impact on results of operations or net assets):

---

(\$000s)		
Undistributed net investment income	\$	(3)
Undistributed net realized gain		3

## T. Rowe Price Equity Income Portfolio

Distributions during the years ended December 31, 2013 and December 31, 2012, totaled \$16,871,000 and \$20,412,000, respectively, and were characterized as ordinary income for tax purposes. At December 31, 2013, the tax-basis cost of investments and components of net assets were as follows:

(\$000s)	
Cost of investments	\$ 932,498
Unrealized appreciation	\$ 365,164
Unrealized depreciation	(52,875)
Net unrealized appreciation (depreciation)	312,289
Undistributed ordinary income	546
Capital loss carryforwards	(88,818)
Paid-in capital	1,020,470
Net assets	\$ 1,244,487

The difference between book-basis and tax-basis net unrealized appreciation (depreciation) is attributable to the deferral of losses from wash sales for tax purposes. The fund intends to retain realized gains to the extent of available capital loss carryforwards. Because the fund is required to use capital loss carryforwards that do not expire before those with expiration dates, all or a portion of its capital loss carryforwards subject to expiration could ultimately go unused. During the year ended December 31, 2013, the fund utilized \$53,694,000 of capital loss carryforwards. The fund's available capital loss carryforwards as of December 31, 2013, expire as follows: \$67,944,000 in fiscal 2017 and \$20,874,000 in fiscal 2018.

### NOTE 5 - RELATED PARTY TRANSACTIONS

The fund is managed by T. Rowe Price Associates, Inc. (Price Associates), a wholly owned subsidiary of T. Rowe Price Group, Inc. (Price Group). The investment management and administrative agreement between the fund and Price Associates provides for an all-inclusive annual fee equal to 0.85% of the fund's average daily net assets. The fee is computed daily and paid monthly. The all-inclusive fee covers investment management, shareholder servicing, transfer agency, accounting, and custody services provided to the fund, as well as fund directors' fees and expenses. Interest, taxes, brokerage commissions, and extraordinary expenses are paid directly by the fund.

The fund may invest in the T. Rowe Price Reserve Investment Fund, the T. Rowe Price Government Reserve Investment Fund, or the T. Rowe Price Short-Term Reserve Fund (collectively, the Price Reserve Investment Funds), open-end management investment companies managed by Price Associates and considered affiliates of the fund. The Price Reserve Investment Funds are offered as short-term investment options to mutual funds, trusts, and other accounts managed by Price Associates or its affiliates and are not available for direct purchase by members of the public. The Price Reserve Investment Funds pay no investment management fees.

### NOTE 6 - LITIGATION

The fund is a named defendant or in a class of defendants in a lawsuit that the Unsecured Creditors Committee (the Committee) of the Tribune Company has filed in Delaware bankruptcy court. The Committee is seeking to recover all payments made to beneficial owners of common stock in connection with a leveraged buyout of Tribune, including those made in connection with a 2007 tender offer in which the fund participated. The fund also is named as a defendant or included in a class of defendants in parallel litigation, which has been dismissed by the district court and is currently on appeal, asserting state law constructive fraudulent transfer claims to recover stock redemption payments made to shareholders. The complaints allege no misconduct by the fund, and management intends to vigorously defend the lawsuits. The value of the proceeds received by the fund is \$25,684,000 (2.06% of net assets) and the fund will incur legal expenses. Management is currently assessing the case and has not yet determined the effect, if any, on the fund's net assets and results of operations.

## **Report of Independent Registered Public Accounting Firm**

### **To the Board of Directors of T. Rowe Price Equity Series, Inc. and Shareholders of T. Rowe Price Equity Income Portfolio**

In our opinion, the accompanying statement of assets and liabilities, including the portfolio of investments, and the related statements of operations and of changes in net assets and the financial highlights present fairly, in all material respects, the financial position of T. Rowe Price Equity Income Portfolio (one of the portfolios comprising T. Rowe Price Equity Series, Inc., hereafter referred to as the “Fund”) at December 31, 2013, and the results of its operations, the changes in its net assets and the financial highlights for each of the periods indicated therein, in conformity with accounting principles generally accepted in the United States of America. These financial statements and financial highlights (hereafter referred to as “financial statements”) are the responsibility of the Fund’s management; our responsibility is to express an opinion on these financial statements based on our audits. We conducted our audits of these financial statements in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. We believe that our audits, which included confirmation of securities at December 31, 2013 by correspondence with the custodian and brokers, and confirmation of the underlying funds by correspondence with the transfer agent, provide a reasonable basis for our opinion.

PricewaterhouseCoopers LLP  
Baltimore, Maryland  
February 7, 2014

### **Tax Information (Unaudited) for the Tax Year Ended 12/31/13**

We are providing this information as required by the Internal Revenue Code. The amounts shown may differ from those elsewhere in this report because of differences between tax and financial reporting requirements.

For taxable non-corporate shareholders, \$16,998,000 of the fund's income represents qualified dividend income subject to the 15% rate category.

For corporate shareholders, \$16,998,000 of the fund's income qualifies for the dividends-received deduction.

### **Information on Proxy Voting Policies, Procedures, and Records**

A description of the policies and procedures used by T. Rowe Price funds and portfolios to determine how to vote proxies relating to portfolio securities is available in each fund's Statement of Additional Information. You may request this document by calling 1-800-225-5132 or by accessing the SEC's website, sec.gov.

The description of our proxy voting policies and procedures is also available on our website, troweprice.com. To access it, click on the words "Social Responsibility" at the top of our corporate homepage. Next, click on the words "Conducting Business Responsibly" on the left side of the page that appears. Finally, click on the words "Proxy Voting Policies" on the left side of the page that appears.

Each fund's most recent annual proxy voting record is available on our website and through the SEC's website. To access it through our website, follow the directions above to reach the "Conducting Business Responsibly" page. Click on the words "Proxy Voting Records" on the left side of that page, and then click on the "View Proxy Voting Records" link at the bottom of the page that appears.

### **How to Obtain Quarterly Portfolio Holdings**

The fund files a complete schedule of portfolio holdings with the Securities and Exchange Commission for the first and third quarters of each fiscal year on Form N-Q. The fund's Form N-Q is available electronically on the SEC's website (sec.gov); hard copies may be reviewed and copied at the SEC's Public Reference Room, 100 F St. N.E., Washington, DC 20549. For more information on the Public Reference Room, call 1-800-SEC-0330.

## About the Portfolio's Directors and Officers

Your fund is overseen by a Board of Directors (Board) that meets regularly to review a wide variety of matters affecting or potentially affecting the fund, including performance, investment programs, compliance matters, advisory fees and expenses, service providers, and business and regulatory affairs. The Board elects the fund's officers, who are listed in the final table. At least 75% of the Board's members are independent of T. Rowe Price Associates, Inc. (T. Rowe Price), and its affiliates; "inside" or "interested" directors are employees or officers of T. Rowe Price. The business address of each director and officer is 100 East Pratt Street, Baltimore, Maryland 21202. The Statement of Additional Information includes additional information about the fund directors and is available without charge by calling a T. Rowe Price representative at 1-800-638-5660.
